## BS in Applied Mathematics

59-63 units
Students in the applied mathematics major (https://www.apu.edu/clas/programs/applied-math-major/) learn to solve problems from a variety of disciplines by developing mathematical models, applying computational algorithms, and analyzing results. The applied mathematics major allows students to choose either the standard track or one of four concentrations:

- Actuarial Science Concentration
- Computer Science Concentration
- Physics Concentration
- Statistics and Data Science Concentration

Students majoring in applied mathematics are encouraged to consider a minor in statistics. For qualified students, an advising pathway is available to pursue a BS in Applied Mathematics with computer science concentration and an MS in Applied Statistics and Data Science in a total of 5 years. Ask your academic advisor for details.

## Career Opportunities

This major prepares students to be quantitative experts in a variety of fields: actuarial science, computer science, physics, university teaching, mathematical research (for business, government, or the academy), cryptography, finance and economics, statistics and data analysis, or operations research and management consulting. APU mathematics graduates have advanced to prestigious graduate schools and have moved into attractive industry positions.

Students preparing to teach mathematics at the secondary level or to pursue graduate studies in pure mathematics are encouraged to consider the mathematics major instead of the applied mathematics major.

## Program Learning Outcomes

## Program Learning Outcomes

Students who successfully complete this program shall be able to:

1. Master fundamental mathematical methods and problem solving strategies.
2. Communicate mathematical ideas in speech and writing, combining precise language and notation with insightful explanation.
3. Use mathematical models to analyze cross-disciplinary problems.
4. Employ appropriate technology and computational techniques.
5. Articulate how Christian perspectives and the study of mathematics and its applications mutually inform and enhance each other.
